

IDPhoto Processor Software

BATCH PROCESS ID PHOTOS FOR PASSPORTS, ANY KIND OF IDENTIFICATION BADGES OR CARDS, PERMITS, PASSES, OR OTHER DOCUMENTS

Easiest Way For Instant ID Photo Processing

IDPhoto Processor

IDPhoto Processor incorporates all the necessary options to meet any number of your specific work requirements and tasks. With IDPhoto Processor, you get something more than just a photo processing tool. This software is a business solution: save time and effort and improve your staff performance and productivity. It's a powerful and affordable tool with excellent performance that helps move your work or business to the next level.

IDPhoto Processor provides a professional solution with fully-functional and powerful tools for batch ID photo processing. Due to its innovative facial detection system, IDPhoto Processor is able to quickly perform many routine tasks like photo crop, color adjustment and automatic enhancement. This smart tool quickly and effectively creates documents containing identification photos. If you are searching for other methods of automatic batch photo correction, look no further - IDPhoto Processor deals with even the most challenging tasks.

Benefits:

- **Professional Software for ID Photo processing** - IDPhoto Processor offers a wide range of functions, and the necessary customizable options for processing a large number of identification document photos quickly.
- **Smart & Intuitive interface** - IDPhoto Processor features a user-friendly layout that helps batch process dozens of ID images at once, so you don't need to have in-depth photo processing skills.
- **Support of most popular formats** - IDPhoto Processor provides full support for the most popular image formats, such as JPEG, BMP, PNG, GIF and TIFF, and offers format conversion support.
- **Effective technical support** - Please contact us 24/7 if you have any questions or requests regarding our software!

Facial Detection System

IDPhoto Processor includes a comprehensive facial detection system that includes fully automatic facial recognition. This system enables automatic processing for any further corrections: for example, automatic customizable crop and automatic center and margin specification for batch photo processing. This is a great system if you want to create consistent ID images quickly and easily and provide photos with a highly professional look.

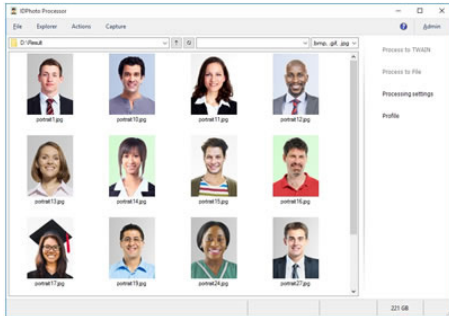

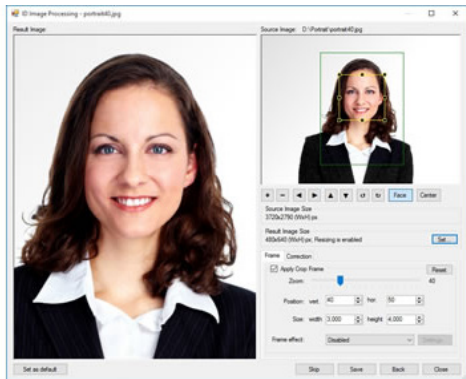

Photo Enhancement

IDPhoto Processor is a versatile image enhancing and resizing tool that can perform a number of standardized tasks like image brightness adjustment, contrast, sharpness and saturation settings to a batch of photos automatically. The software provides the best results in photo processing for your environment.

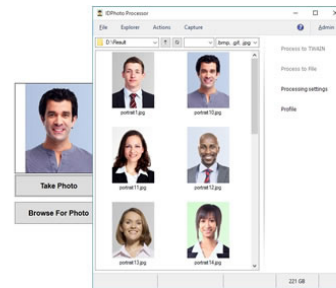

Whole process automation

For further control and to avoid mistakes, in addition to full automation IDPhoto Processor includes the option to view and add processing settings, i.e. obtain extensive options for this product. For example you can send each photo per email, upload it to any website, save in the database or specify its name from excel file automatically. The user can choose whether to apply the same settings for the other photos in the batch or make adjustments when the software cannot recognize a face or is unable to process the photo automatically. Any level of customization for your business - with IDphoto processor it is possible!

TWAIN Interface Support

Our software supports TWAIN protocol, so you can use the «Process to TWAIN» option, which sends images to the program or to a device using the TWAIN driver. This significantly improves the performance of photo processing and transfer, and speeds up the process of creating documents, ID cards, passes and so on.

IDPhoto Processor is a fully-functional suite for automatic batch processing of ID photos.

- accepts photos of various formats and sizes;
- automatic face detection;
- resizes or crops photos to preset requirements;
- support: Windows 10/8/7/Vista/XP (64-32bit);
- photo correction (sets contrast, sharpness, brightness etc.);
- saves results to any destination or may replace the original (as you specify);
- EXIF tags management and support (including DPI);
